The Surveying Studio course takes a student-centered and problem-based approach to learning. Students work in small groups, with the guidance from teachers, to solve various cases. It aims at integrating theoretical knowledge into real life scenarios in an innovative manner. In addition, the course also serves to enhance students' presentation, cooperation and leadership skills.

BSc (Surveying)
SURVEYING STUDIO

One unique feature of our programme is the Surveying Studio course in which students are assigned to open-ended problems simulating real life situations. Cases with different themes are selected and developed for each year of study. For example:

"*Explore current and future issues in the real estate development industry from a regional or political perspective*"

"*Advise clients on the feasibility of a construction project or real estate investment opportunity and recommend solutions*"

"*Identify and tackle problems in a real estate development project from a developer's perspective*"
