LI, Yishiqin

Start date:	9/1/2017
Supervisor:	Dr Weifeng Li
Research interest:	Her research interests lie in land institutions and urban redevelopment, particularly in the Chinese context. One of her recent researches investigates collectively owned land redevelopment in Shenzhen, China, by looking into the institutional transition, redevelopment process and the resulting economic and spatial effects. From a multi-scale perspective, it explores the impetus and power interplay behind the institutional transitions in urban redevelopment at the regional and city scale, how the institutional arrangements affect negotiation between the key stakeholders from the behavioral aspect, and how the interaction of these aspects result in the economic and spatial outcomes of land redevelopment projects. These efforts aim to gain a better understanding of urban transformation and provide suggestions on land institutions and urban redevelopment policies in China.
Teaching and research experience:	Teaching Assistance, CCCH9033 Sustainable Urban Development and Hong Kong, 2018-2019
